

KAIST Fall 2018

CS408E/F: Computer Science Project

User-Centered Design Process

2018.08.27

Juho Kim

CS408

Project-oriented course in which students design, develop, test, validate, and present a software system in a team.

*“What goal to keep in mind
as we design our 408 system?”*

Usability

*“What process should my team follow
while working on a 408 project?”*

User-centered design
as a guiding principle

*“Stupid users keep making mistakes
when using this simple feature.”*

*“I built this really cool thing.
How come nobody uses it?”*

Human Error?
No, it's BAD DESIGN.

You're not the user.

- System needs to communicate with users.
 - Users are NOT LIKE YOU.
- The user is ALWAYS RIGHT.
 - Usability problems are the designer's fault.

Computer
system

interface

Human
user

User experience **models**

Implementation model

Technology-centric

Conceptual model

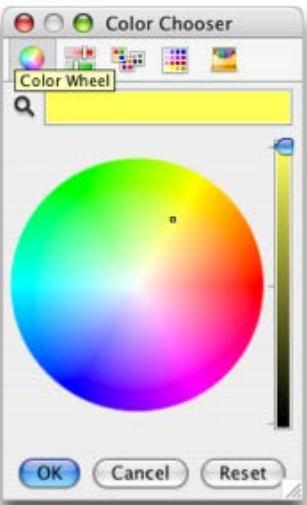

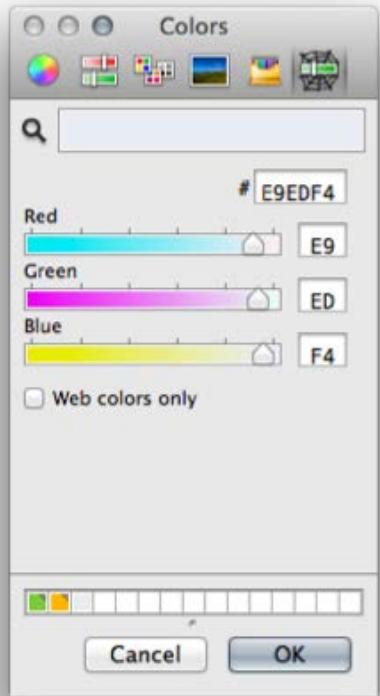

Mental model

Tom Hiskey / tomhiskey.co.uk

User-centric

Example from <https://medium.com/@vinoth3.141/mental-model-ux-64e7a9d2a03f>

Usability

how well users can
use the system's functionality

Dimensions of Usability

- **Learnability:** is it easy to learn?
- **Efficiency:** once learned, is it fast to use?
- **Safety:** are errors few and recoverable?

What Properties Does Good Software Have?

- Performance
- Cost
- Security
- Maintainability
- Size
- Reliability
- Standards
- Marketability
- Modularity
- Intelligence
- **Usability**

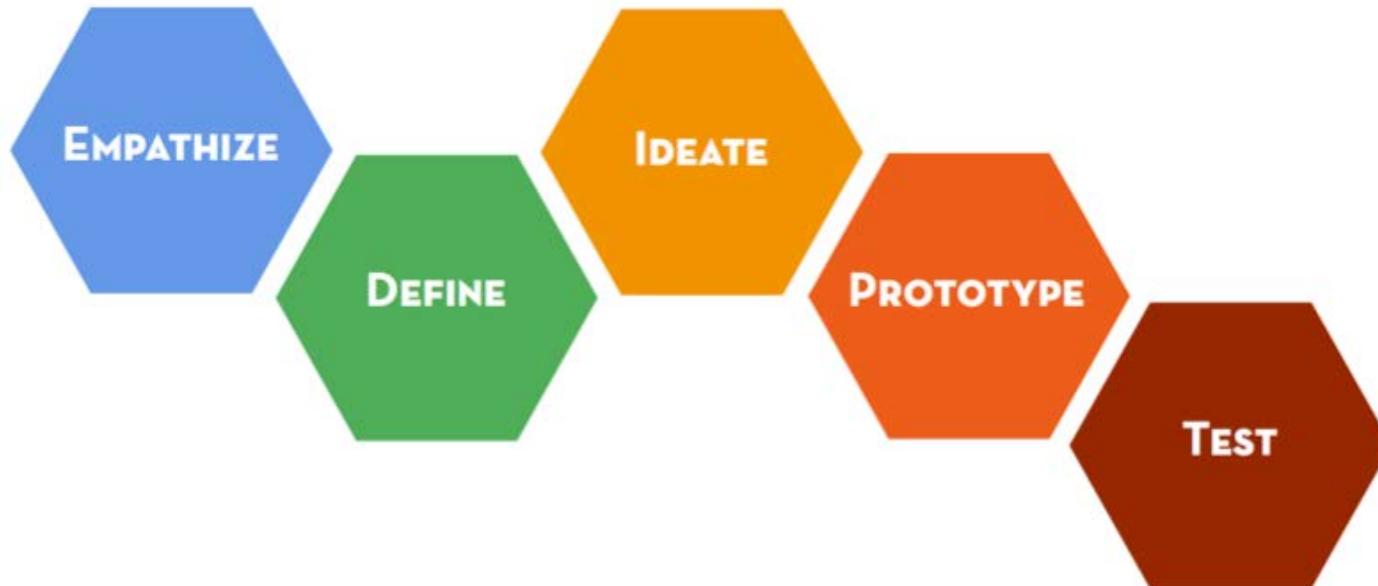

Designing Usable Software: User-Centered Approach

Laseau's Funnel

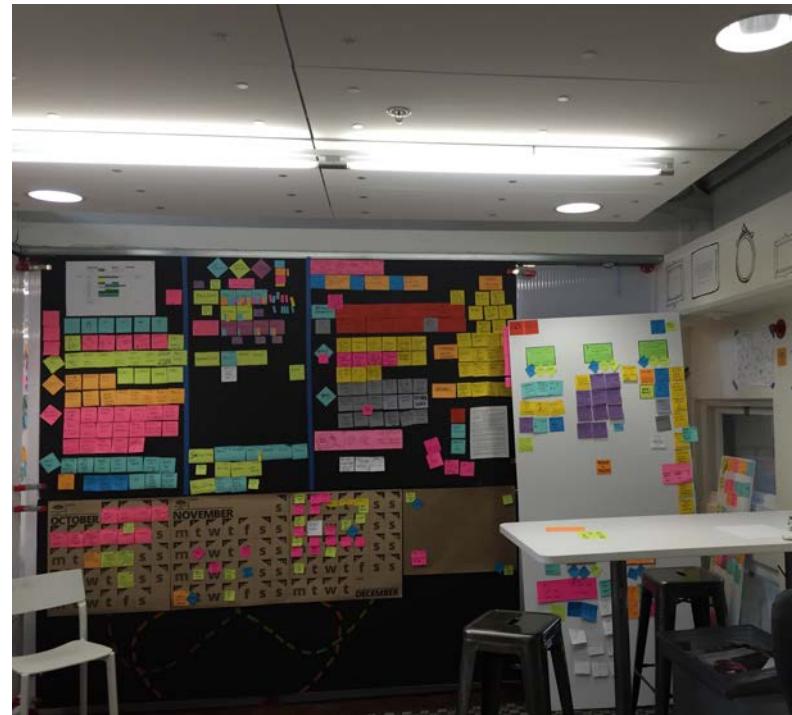

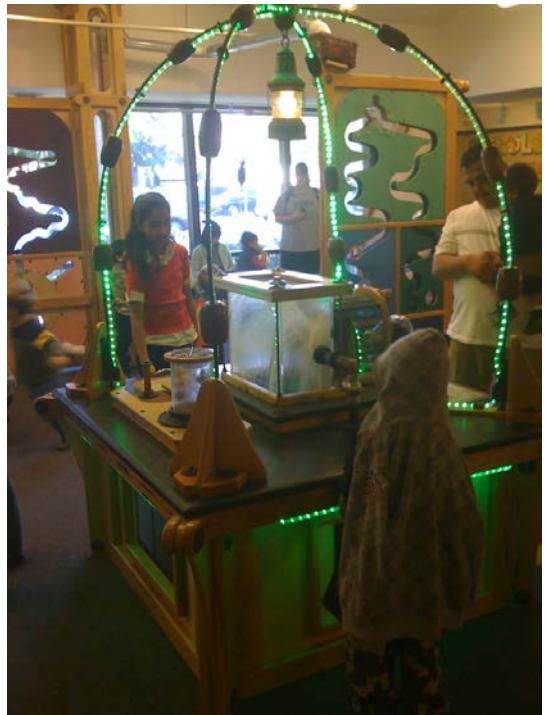

User-Centered Design Process

Needfinding

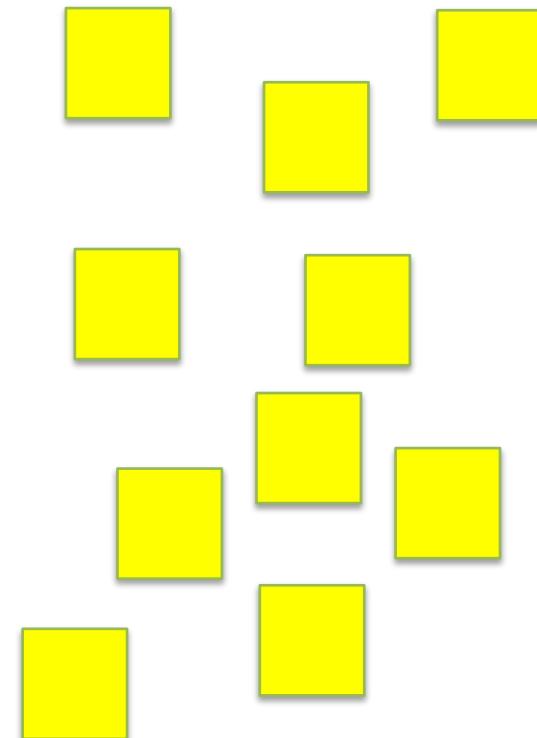

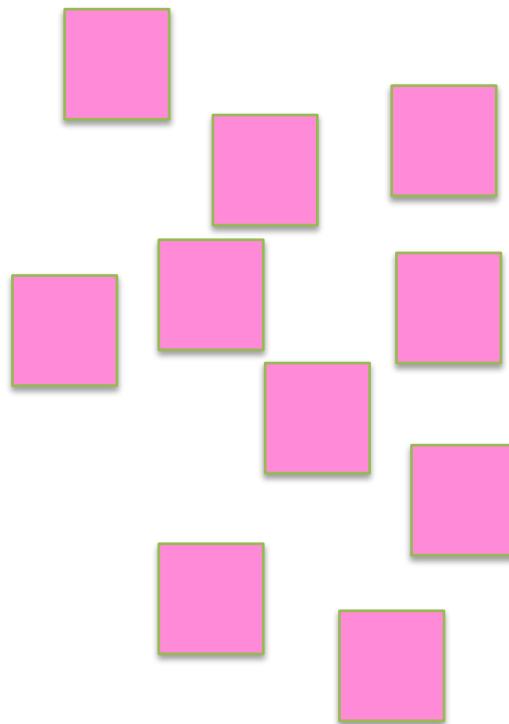

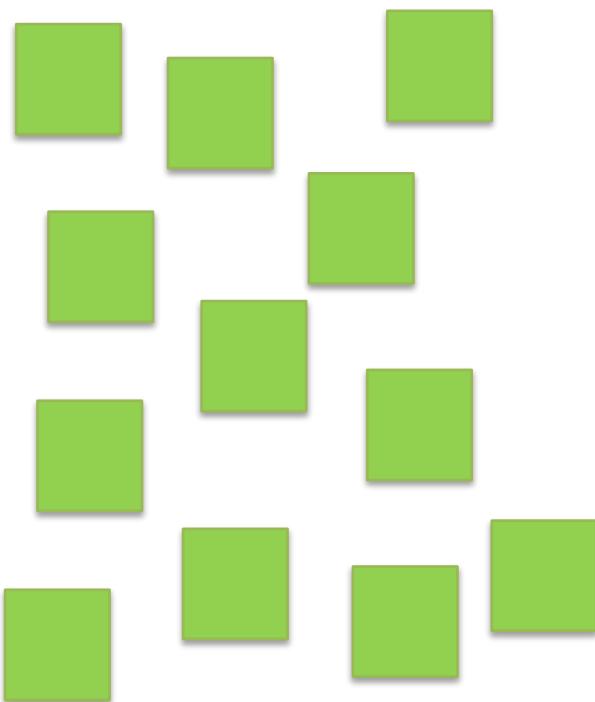

Popular Methods for Needfinding

- Interview & Observation
- Contextual Inquiry
 - In the user's actual work environment, discussing actual work products
 - Establish a master-apprentice relationship
- Participatory Design
 - Include a user directly on the design team
 - When domain expertise matters

Users

Needs

Insights

Point of View

- Focus on ONE meaningful challenge.
- “a unique, concise reframing of the problem that is grounded in user needs and insights.”

POV Example

- We met
 - a young millennial living in Daejeon.
- We were amazed to realize
 - he protects & preserves clothing by not washing them often.
- It'd be game-changing to
 - help him care for his clothes while keeping them clean.

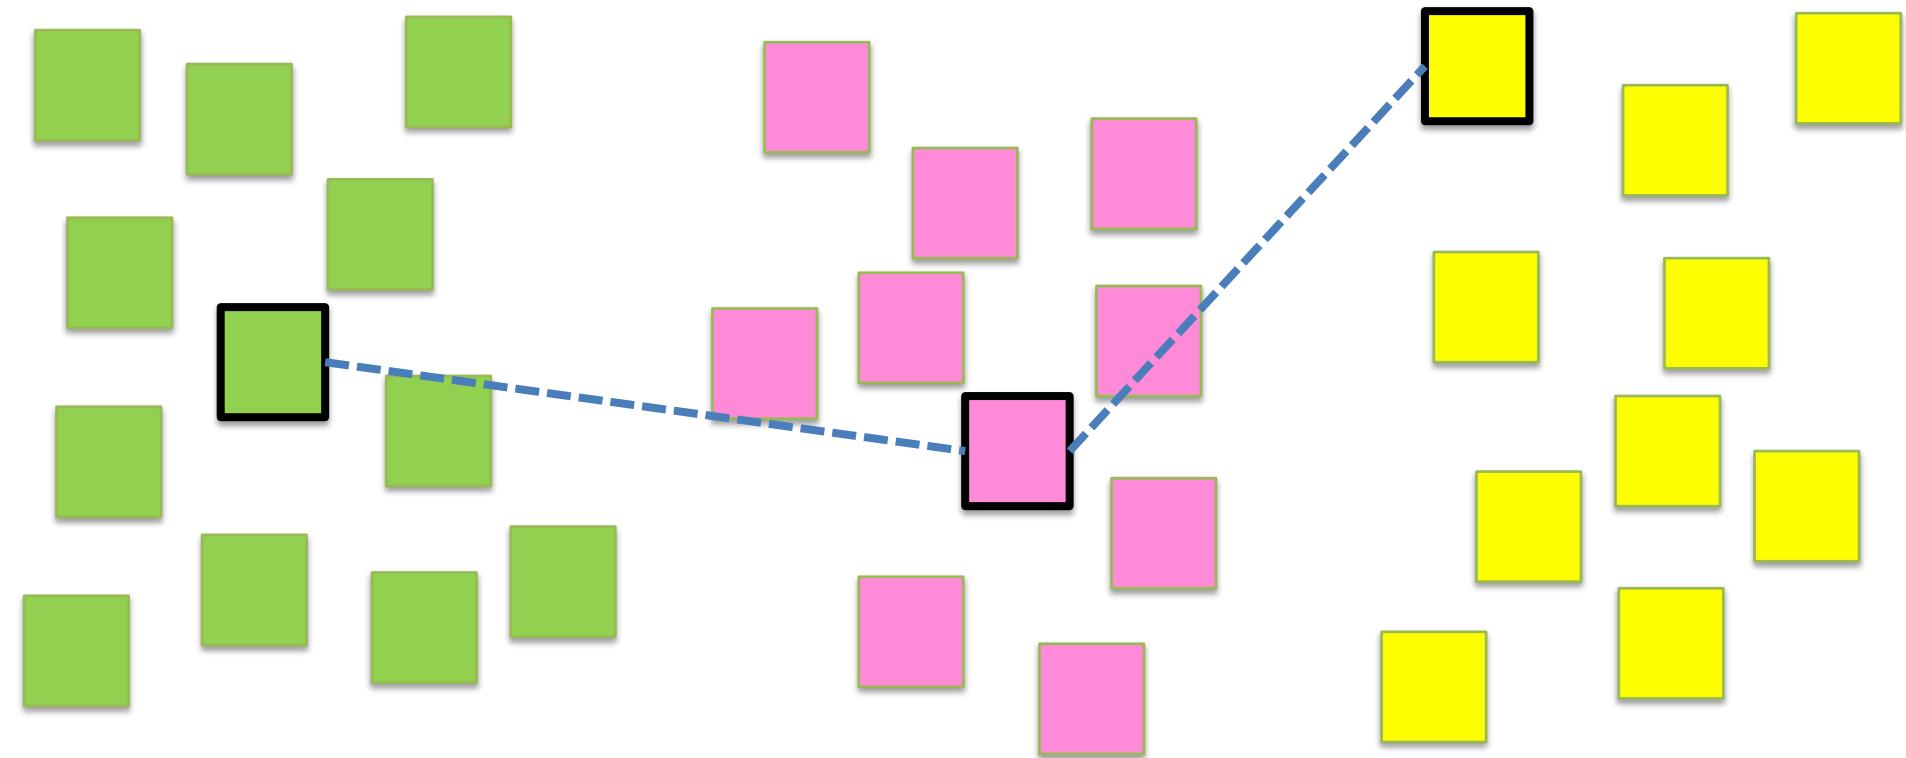

- Tide Total Care keeps your colors like new.
- Protects Colors -- Conditions wash water to help prevent damage from chlorine and mineral deposits
- Maintains Finish -- Helps maintain the smoothness and overall texture of your clothes by reducing the friction between fibers that occurs during washing and daily wear.

Users

Needs

Insights

"We met..."

"We were amazed to realize..."

"It'd be game-changing to..."

For each POV, come up with HMW questions

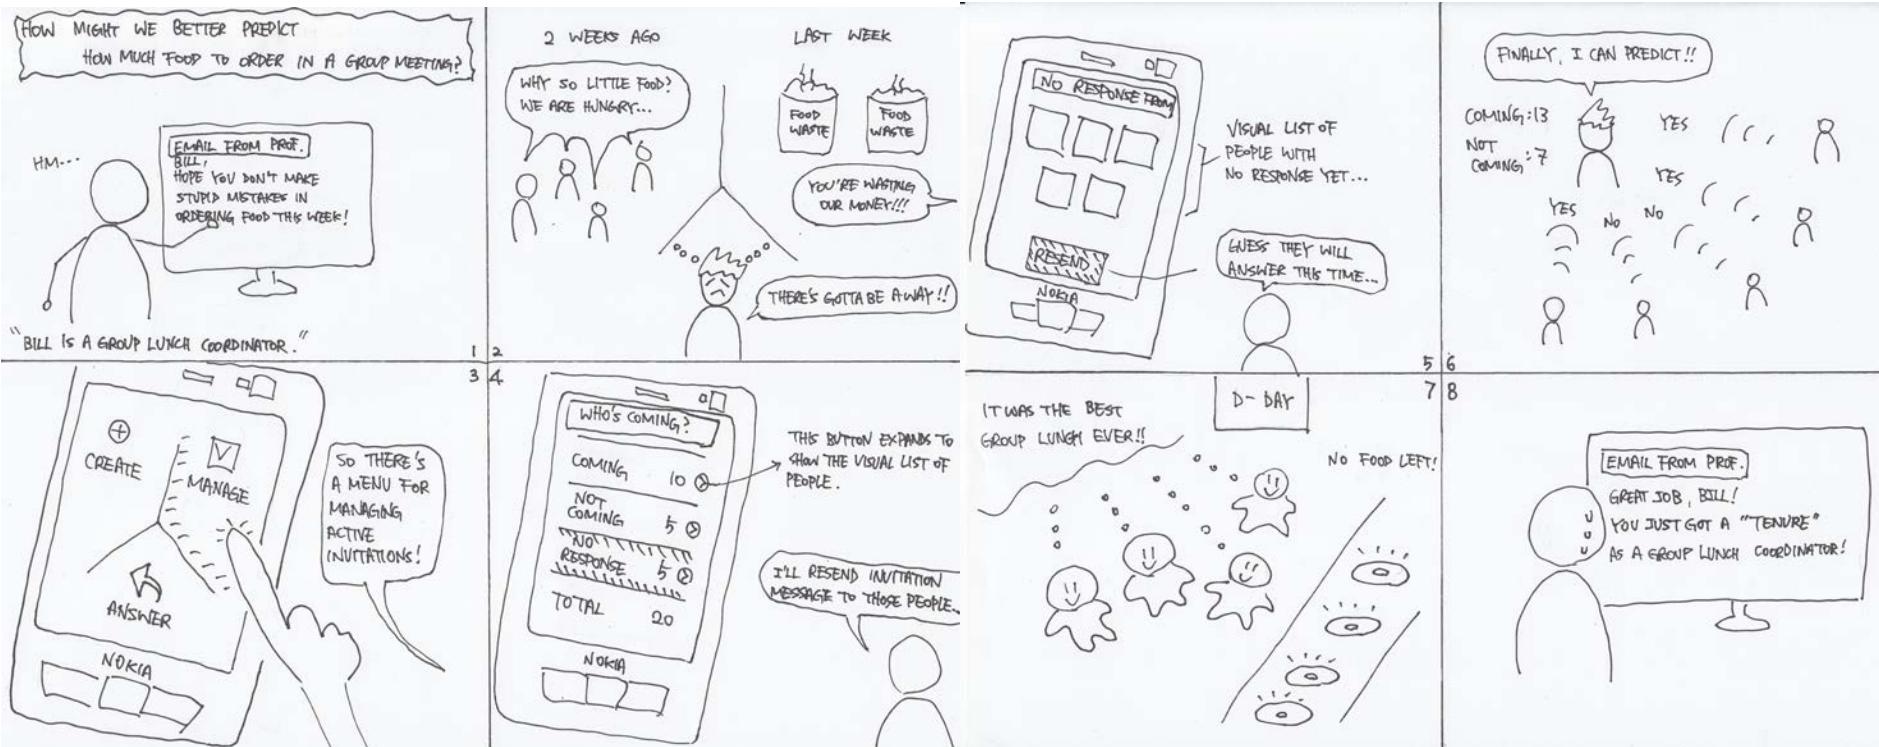

- How Might We...?
 - “Might” helps you defer judgment.
 - Go for quantity.
 - Encourage wild, open ideas.
-
- **Too narrow:** “HMW create a cone to eat ice cream without dripping?”
 - **Too broad:** “HMW redesign dessert?”
 - **Proper:** “HMW redesign ice cream to be more portable?”

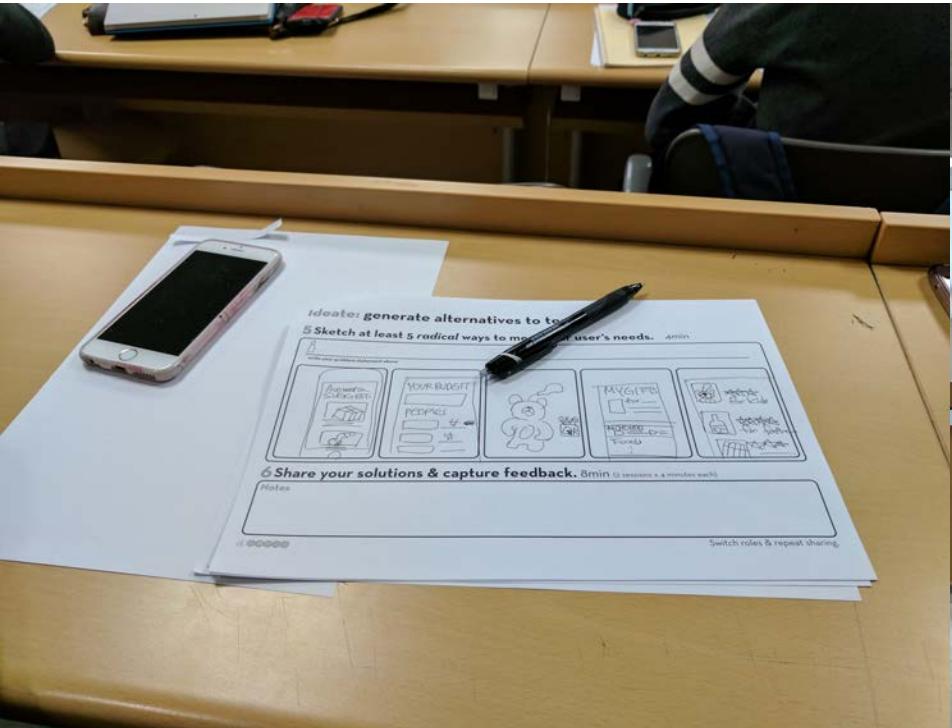

For each HMW, come up with solution ideas

Extreme in some way

- ultra-learnable
- ultra-efficient
- ultra-safe (preventing all errors)
- for illiterate users
- for blind users
- for children
- for the elderly
- for use while driving
- for other extreme users, context, situations

Storyboarding

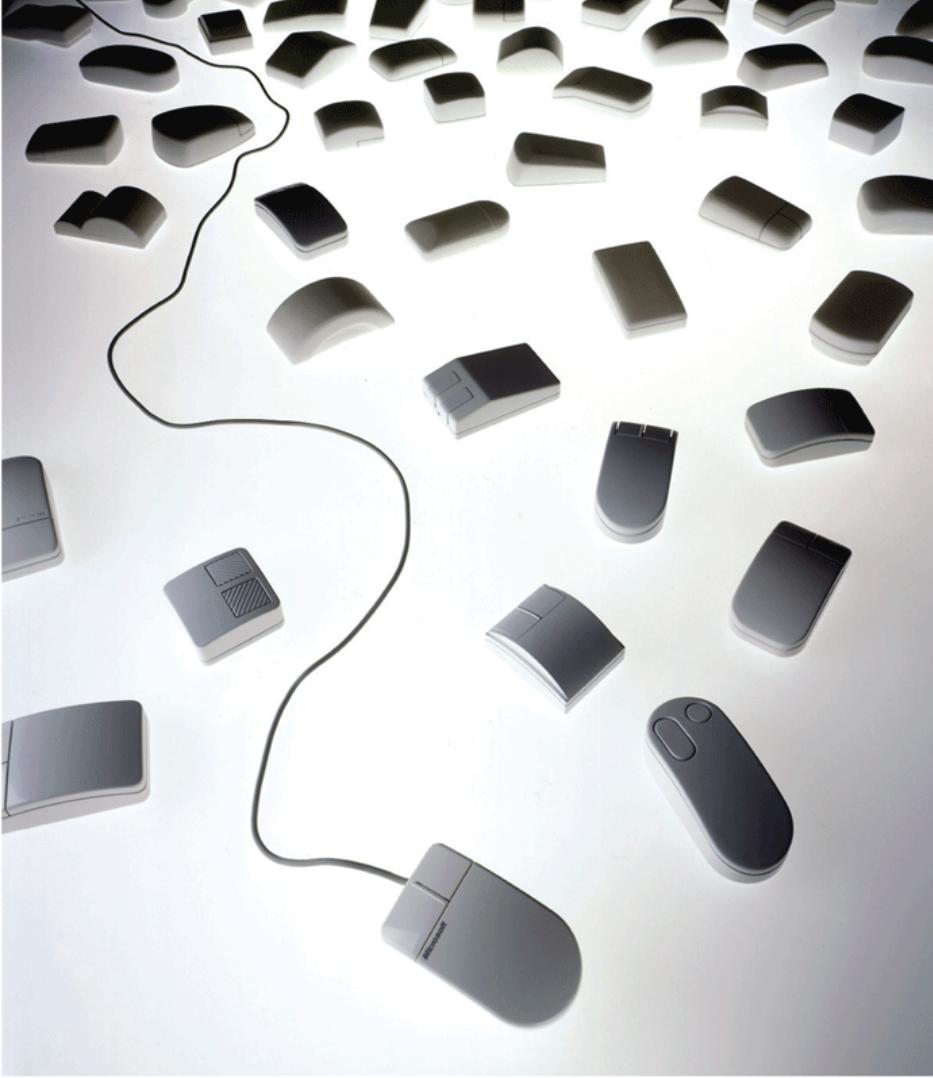

Prototype

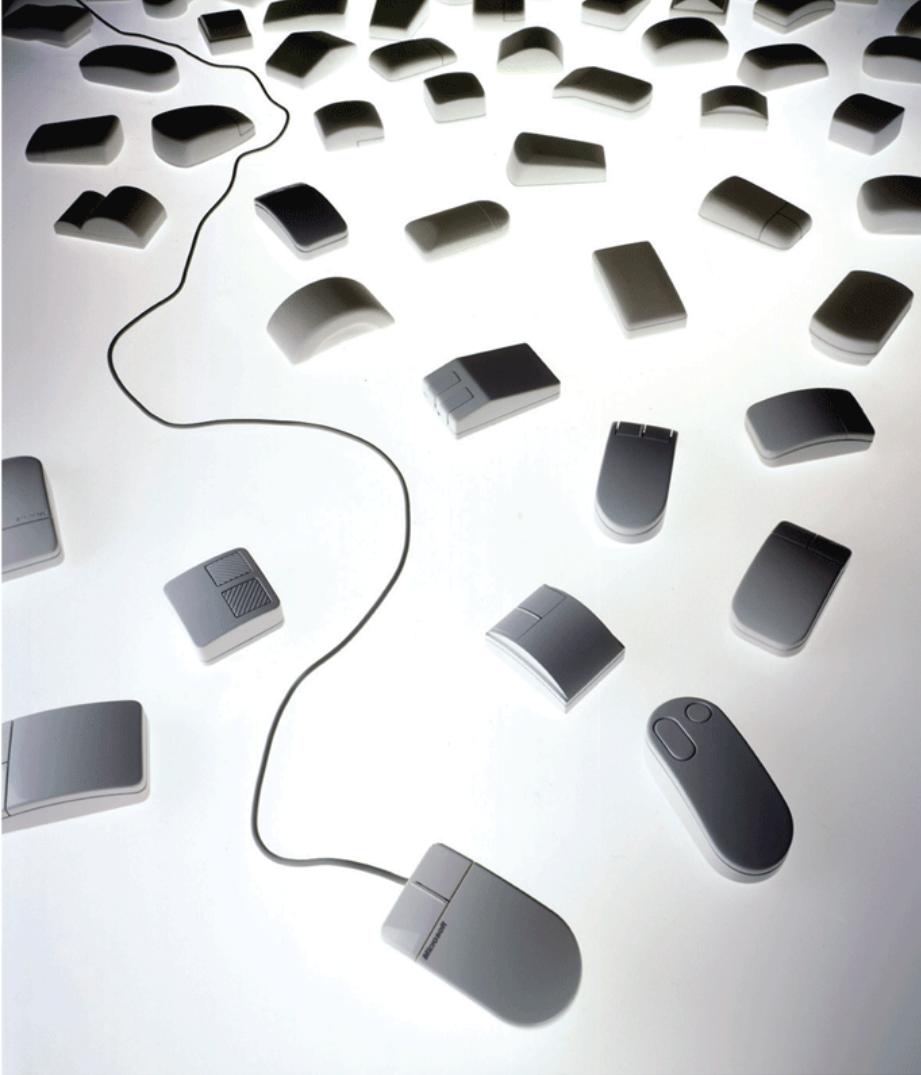

*“A representation of a design,
made before the final solution exists.”*

Moggridge, Designing Interactions

Prototyping a Computer Mouse

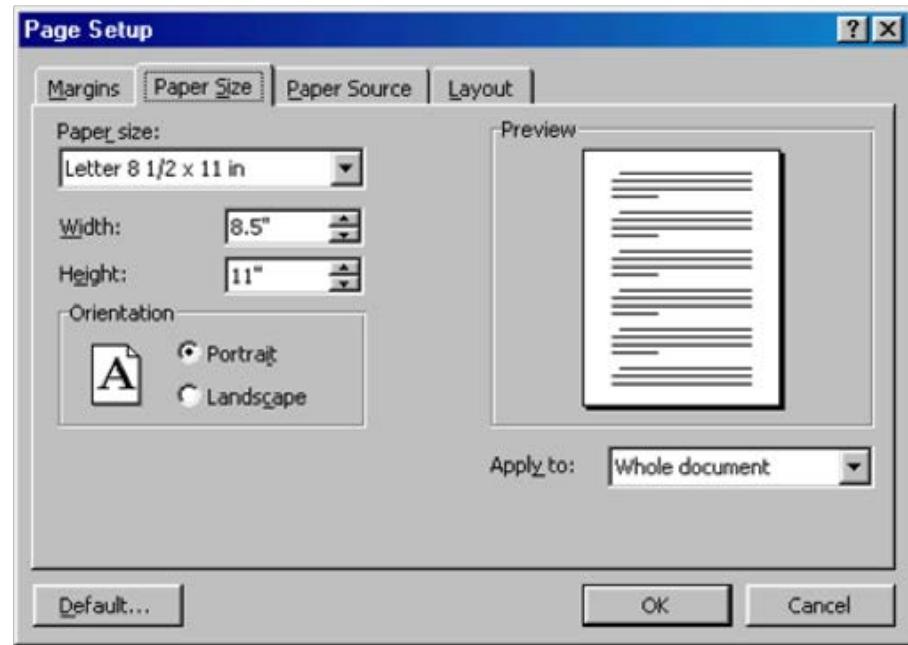

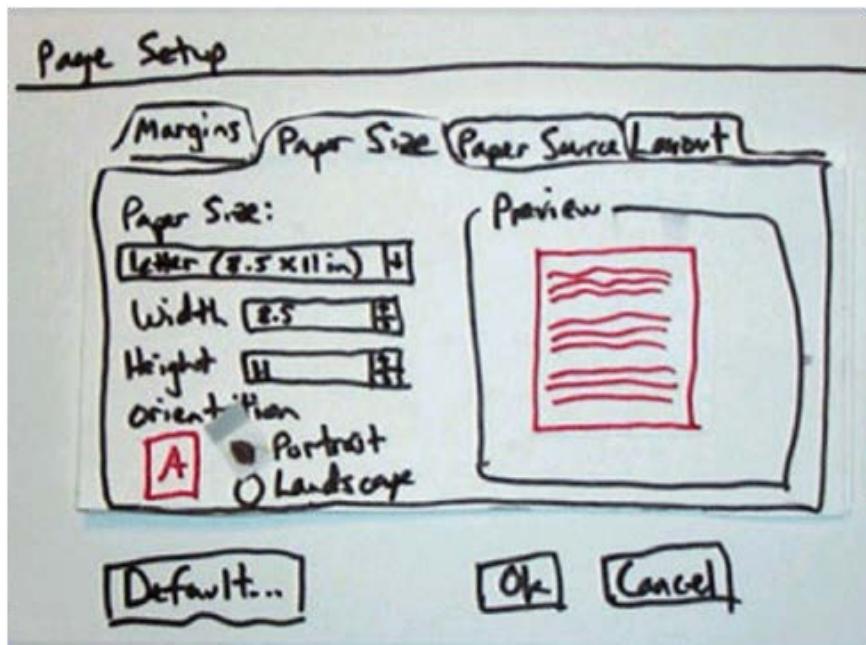

<https://www.youtube.com/watch?v=0LQr1Flold0>

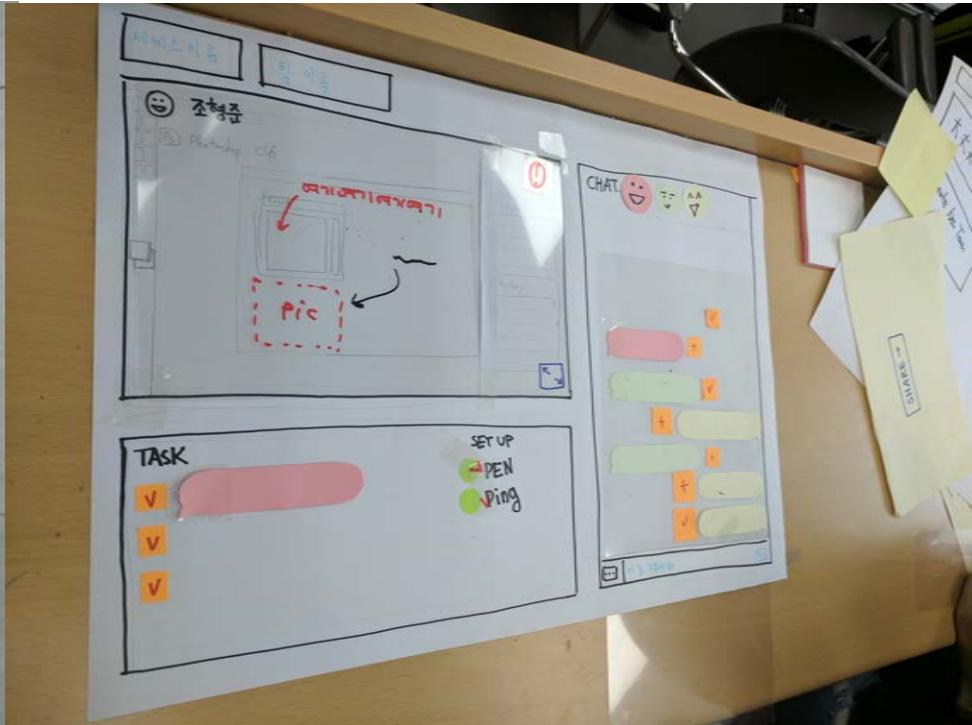

- “Even best designers are wrong the first time.”
- “Multiple prototypes matter so that you can compare and test your assumptions & hypotheses.”
- “Offends engineers.”

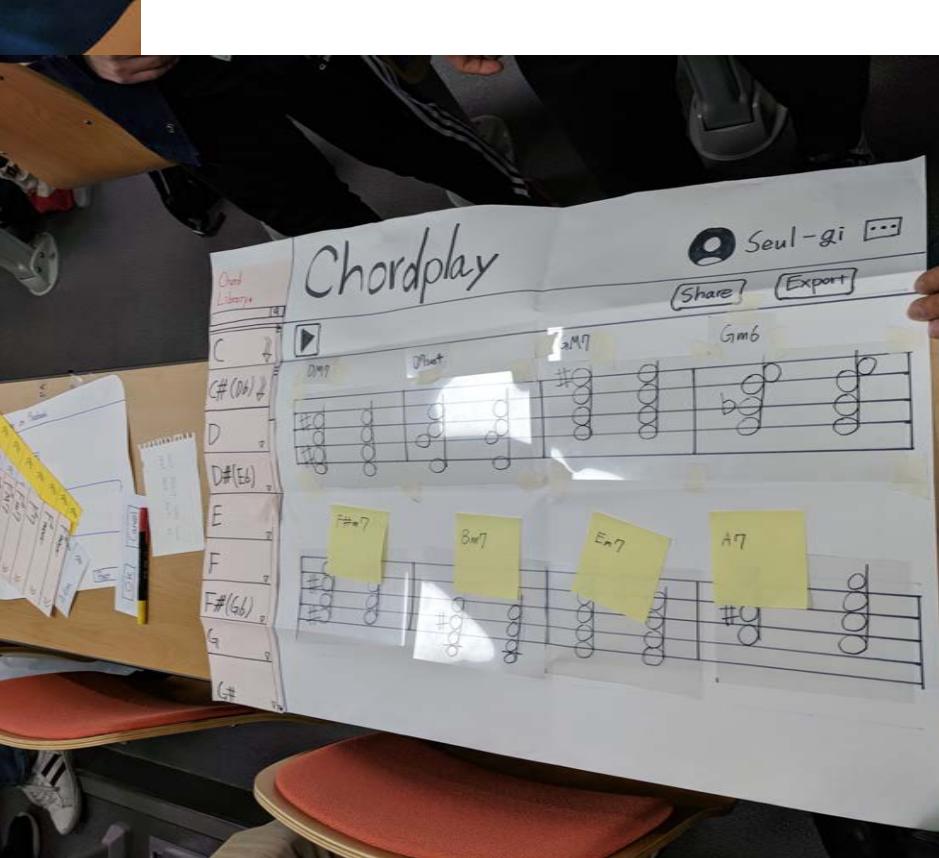

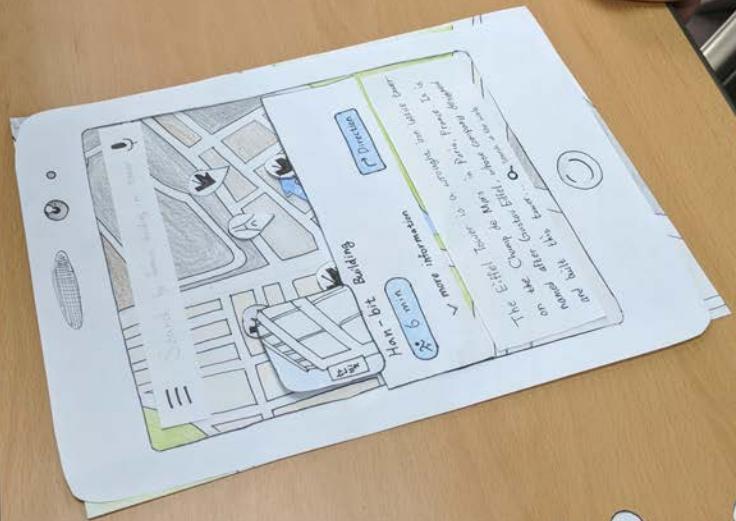

<https://www.youtube.com/watch?v=0LQr1Flold0>

Paper Prototyping

Hanmail Paper Prototype

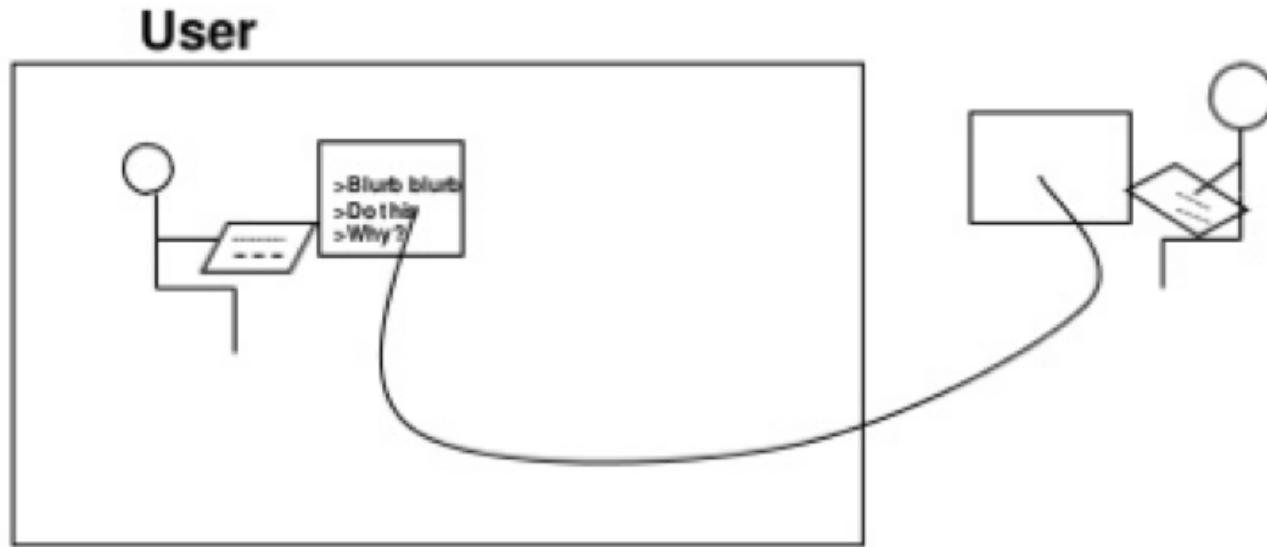

- What are some of the useful techniques?

Why Paper Prototyping?

- Fast to build
- Easy to change
 - Even *during* a user test
 - No code investment
- Focuses attention on big picture
 - Designer doesn't waste time on details
 - Customer makes more creative suggestions, not nitpicking
- Nonprogrammers can help
 - Only kindergarten skills are required

Wizard of Oz Prototyping

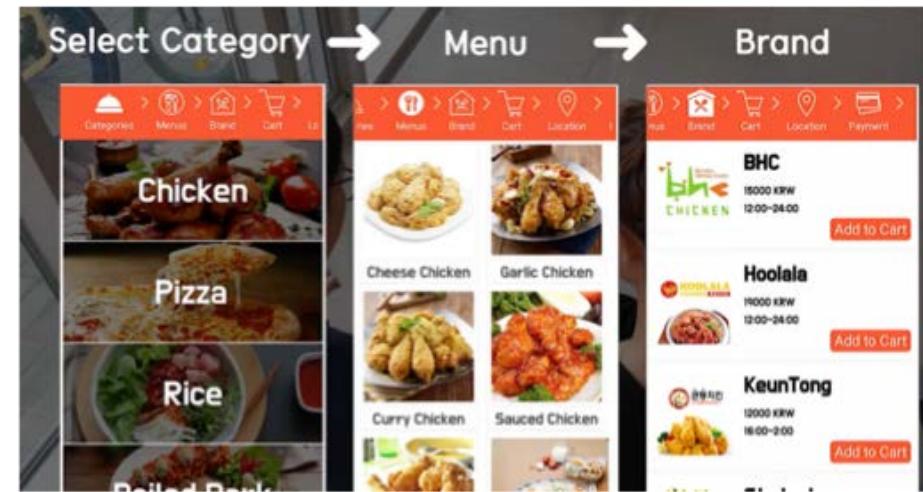

Kramer's Moviefone

Wizard of Oz Prototyping

- Simulate machine behavior with human operators
- Make an interactive prototype without (much) code
- Rapidly test the prototype with people
 - Higher fidelity than paper
 - Lower cost than actual implementation
- Simulations might misrepresent, wizard training & fatigue

Video Prototyping

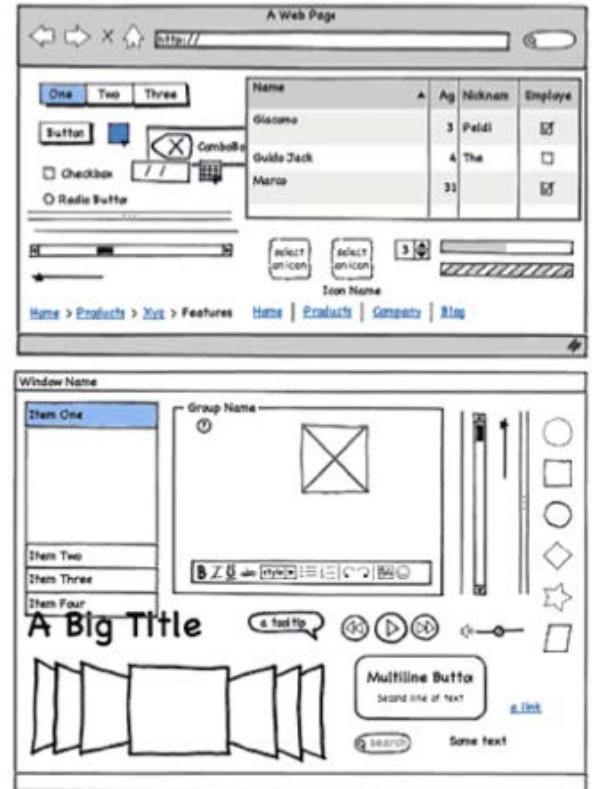

Video Prototyping

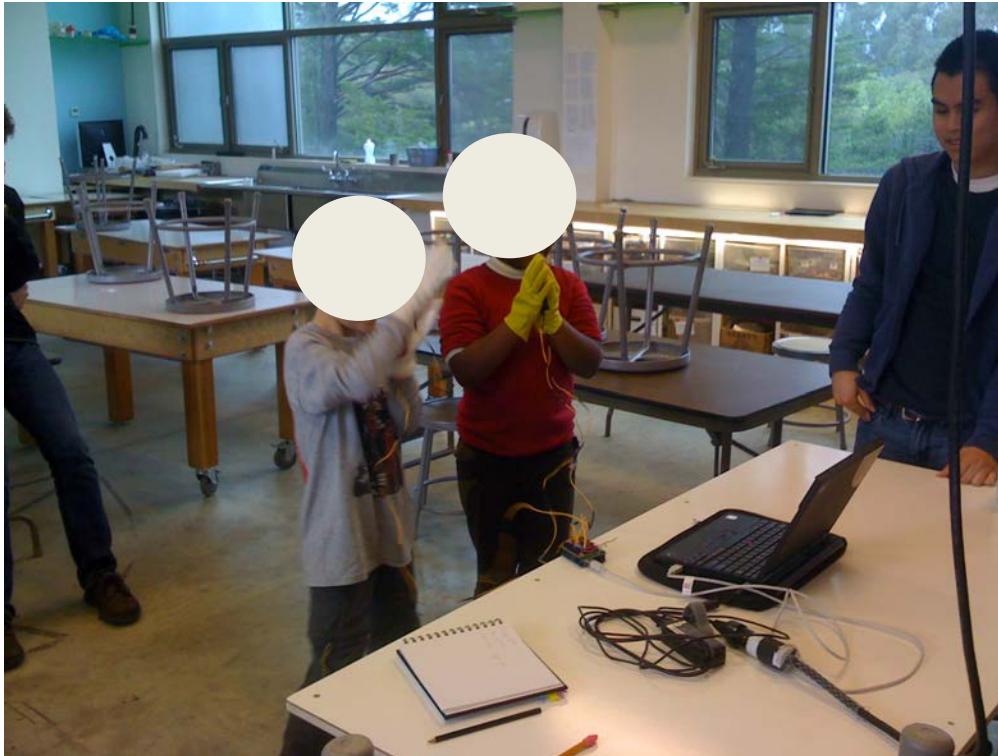

- Capture rich & real context, illustrate context of use
- Great communication tool, portable
- Connects UI and task
- Full usage scenario needs to be thought out
- Good storyboards & paper prototypes can yield quick videos
- Not interactive
- Can be caught up in detail

Prototype Tools

- Photoshop, Powerpoint
- Balsamiq Mockup, Marvel, InVision, proto.io, ...

User Testing

Types of User Testing

- **Formative evaluation**
 - Find problems during iterations
 - Often in lab, with chosen tasks
 - Qualitative observations (usability problems)
- **Field study**
 - Find problems in context
 - In real context, on real tasks
 - Mostly qualitative observations
- **Controlled experiment**
 - Tests a hypothesis (e.g., interface X is faster than interface Y)
 - Often in lab, with chosen tasks
 - Mostly quantitative observations (time, error rate, satisfaction)

Presentation & Communication

HOW TO INVITE FRIENDS FOR THE NEXT MEAL
IN A MINUTE

It only takes 3 Steps

1. Startup **FoodEx**
2. Select friends nearby.
3. Press Send!

FoodEx
does the rest!

Why don't you **FoodEx**

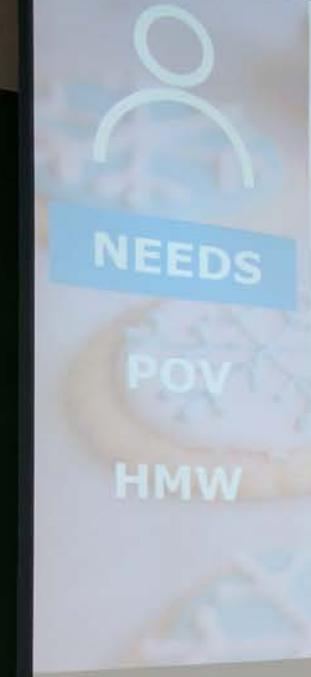

Tasks

1. Browse through contents, within and between categories.
2. View and like Jjols created by other Ducks.
3. Create and share Jjols with other Ducks.

13 >> User Interface

VIP

User Needs & Problems

From DP1,

- Interviewee C
- Early 30s married man
- Living in the United States of America.
- He cooks breakfast every day together with his wife.
- He wants to cook together with his wife efficiently.

A young woman with long dark hair tied back, wearing glasses, a white t-shirt, and a blue denim apron over black pants, stands gesturing with her hands while speaking.

A young man with short dark hair and glasses, wearing a white t-shirt with a blue geometric logo, stands next to the woman, smiling.

A young woman with long dark hair, wearing a white t-shirt, stands behind a wooden podium.

A young man with a baseball cap, wearing a grey t-shirt, stands behind the podium, looking down at a laptop.

Presentation Order

1. Introduction 6 11. Work Plan
2. Problem 7 12. Solution 17 Evaluation
3. Solution 8 13. Conclusion 18 Feedback
4. Conclusion 9 14. Q&A 19 Q&A

Creativity & Challenge

KAIST

CS374 Design Process Example

- [DP0] Week 03: Team Formation
- [DP1] Week 04: Needfinding
- [DP2] Week 06: Storyboards
- [DP3] Week 07: Paper Prototyping
- [DP4] Week 09: Lo-fi Prototyping
- [DP5] Week 11: Mid-fi Prototyping
- [DP6] Week 13: Hi-fi Prototyping
- [DP7] Week 14: User Testing
- [DP8] Week 16: Iteration & Wrap-up

Takeaway Messages

- It's not human error. It's bad design.
- Usability: learnable, efficient, & safe (\neq good-looking)
- User-centered design process
 - Empathize **→** Define **→** Ideate **→** **Prototype** **→** Test
- Use different prototyping methods for your needs.
- Talk to users well before you have a final solution.
- Iterate. Multiple times.
